

Click to dial and Call Control on your PC with Go Integrator

You can download **Go Integrator** by clicking on this [link](#). Follow the prompts to install the application on your PC.

Once the installation is complete you can follow the steps below to configure and login.

Right click on the grey **Go Integrator icon** and select **Configuration**

Select **Telephony** from the left-hand side menu

Enter your **Username and Password**

This is you're your application username and password. If you don't have this, your company administrator can provide this, or please let us know by reply and we will create a new username and password for you. This application password is also the same that is use for the Mobile Application.

Select **Dialling** from the left-hand side menu

Tick the box for **Clipboard Dialling** and press **Save**

The configuration will update, and The **Go Integrator** icon will change to green.

Once these steps are completed correctly you are ready to start.

To Call a Telephone number on your screen

Highlight the full number (including +44, as this is recognised) and right click with the mouse.

The **Go Integrator** app will appear in the bottom right corner of your screen. Click this Pop-Up window and your phone will connect the call.

Additional Features available

There are other features you may like with the Go Integrator application, such as Call Controls, adding numbers to your personal address book, viewing your Call History and seeing when other users are on the phone with Presence. [Click Here](#) to find out more.
